## Grading

Tranquebar Coins are primitive coins. A blank is placed between a fixed and a loose die by hand, and the loose die is hit by a hammer. The force used differs from coin to coin, and many coins were minted using worn dies, so weakly minted coins are common. The blank was placed by hand between the two dies, resulting in many off-center coins. So good minted, full-center coin without wear from Tranquebar, grading 01, are very rare and are sold for a high price. Prices for 01 coins are not included in this catalogue. The price for a 01 coin can be much higher than for a 1+ coin.

The coins are shown as photos. It gives the real look of the charming variation of Tranquebar coins. More or less worn, more or less full-centered, it gives the real appearance of Tranquebar coins.

The prices are in Danish kr.

## Rarity

Rarity of Tranquebar coins is difficult to establish. Some coins stay in old collections for long time. Other coins are still found in Tranquebar. This is my best proposal and it has to be taken with due reservations

## F5 Trail strikes

166. 2 royalin 1756

Dies for 1 and 2 royalin were produced at the Royal Mint in Copenhagen. They were either undated or had the year 1756. They were sent to Tranquebar, where they arrived in 1752. The striking of undated royalin might have started in the year 1753, when the right to mint silver was obtained.

Before the dies were sent to Tranquebar some trail strikes were made of both 1 and 2 royalin, both without year and with the year 1756. Strikes were made on tin, silver, gold and on F5 1 and 2 skilling coins.

# Re-stuck Tranquebar Coins

Some lead-coins from Tranquebar are stuck on an older coin. Such re-stuck coins can give us information of the order of striking the coins. We have now many re-stuck lead coins from Tranquebar. Therefore the order of striking of the lead coins from Tranquebar now is rather reliable. Many years back I used the order of striking to establish order of Tranquebar lead-coins in World Coins. It is almost the same order that is used in this catalogue.

	<p>76. Big Cross on 75. Wyvern. On the left arm of the cross is the head of the Wyvern. On the outermost left of the coin is wing, body and leg of the Wyvern</p>

# Costal protection

Tellerlunds map from 1733 shows Tranquebar around 1690. It is based on old drawings from 1690.

North is to the left in the picture. The Fort Dansborg is seen in the north-eastern corner of the map.

Dramatic changes have taken place in Tranquebar since the map was made. The black line on the map shows where the coastline is today. A big part of the town has been taken by the sea. When the sea takes part of the town, old coins is often washed free. This is the main reason why so many Tranquebar Coins has appeared the last fifty years.

Since the tsunami coastal protection with big stones has been made, and now the sea is not likely to take more of Tranquebar. So the supply of coins from Tranquebar will probably be reduced in the future.

The beach protected by stones in front of Dansborg and Hotel Bungalow on the Beach.
